User Registration and Login

Description:

Users can register a new account and log in. Each account ID can only be registered once. Attempting to register with an already registered ID will prompt an error.

Status: Implemented. Users can successfully register a new account and log in. If a user tries to register with an existing username, an error message is displayed.

The beautification and more polished interface for the login and registration pages are planned for future implementation.

User Profile

Description:

Users can log out from their account. The profile page displays a randomly colored avatar generated based on the user's username. Users can navigate back to the main page by clicking the home button.

Status: Implemented. Users can log out, view their profile with a dynamically generated avatar, and navigate back to the home page.

Creating and Managing Posts

Description:

Users can create posts with a title and content. These posts are displayed correctly in the "Recent Posts" section. Users can like posts, and the like count is updated. The delete post feature is implemented but occasionally encounters issues that need to be resolved in the future.

Status: Implemented. Users can create, view, and like posts. The delete post feature is partially functional but needs further refinement.
